The manufacturer works constantly on the further development of all the types and models. Therefore please understand that we have to reserve the right to make design, equipment and technical modifications.

To get to know all the benefits of your new appliance, please read the information contained in these instructions carefully.

The instructions apply to several models. Differences may occur. Text relating only to specific appliances is marked with an asterisk (*).

Instructions for action are marked with a ►, the results of action are marked with a ▷.

1 Appliance at a glance

1.1 Overview of the appliance and options

Note

- Place food inside the appliance as shown in the diagram. This allows the appliance to save energy during operation.
- Shelves, drawers and baskets are arranged for optimum energy efficiency on delivery.

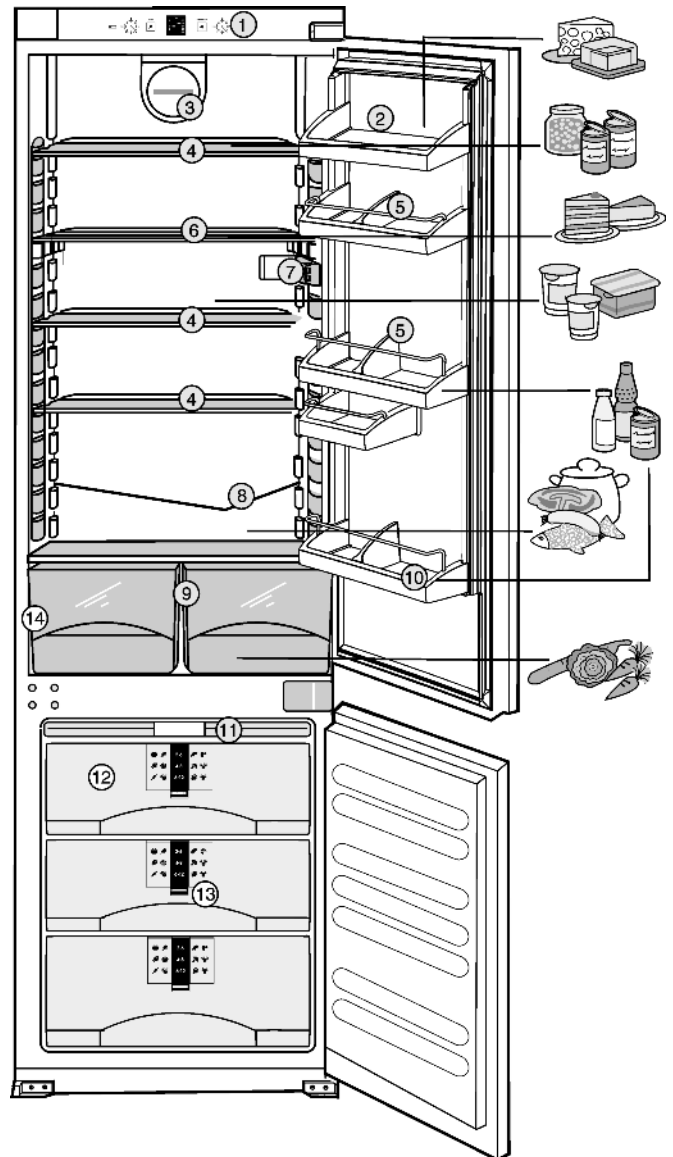

Fig. 1

- | | |
|------------------------------------|-----------------------------------|
| (1) Operating and control panel | (8) Defrost water drain |
| (2) Butter and cheese compartment* | (9) Vegetable drawer |
| (3) Fan | (10) Tall bottle and drinks shelf |
| (4) adjustable storage surface | (11) Cold accumulator* |
| (5) Preserves rack, adjustable | (12) VarioSpace |
| (6) split storage surface* | (13) Information system |
| (7) Lighting | (14) Type plate |

1.2 Range of appliance use

The appliance is suitable solely for cooling food in a domestic environment or similar. This includes use in, for example

- in staff kitchenettes, bed and breakfast establishments,
- by guests in country homes, hotels, motels and other forms of accommodation,
- in catering and similar services in the wholesale trade

Use the appliance solely as is customary within a domestic environment. All other types of use are inadmissible. The appliance is not suitable for storing and cooling medicines, blood plasma, laboratory preparations or similar substances and products covered by the 2007/47/EC Medical Devices Directive. Misuse of the appliance can result in the stored products

suffering harm or perishing. Furthermore, the appliance is not suitable for operation in potentially explosive atmospheres.

The appliance is set to operate within specific ambient temperature limits according to its climate rating. The correct climate rating for your appliance is indicated on the type plate.

Note

► Compliance with the ambient temperatures indicated is required, otherwise the cooling performance is reduced.

Climate rating	for ambient temperatures of
SN	10 °C to 32 °C
N	16 °C to 32 °C
ST	16 °C to 38 °C
T	16 °C to 43 °C

1.3 Conformity

The refrigerant circuit has been tested for leaks. When installed, this appliance complies with the relevant safety provisions and EC directives 2006/95/EC and 2004/108/EC.

1.4 Saving energy

- Always ensure good ventilation. Do not cover ventilation openings or grille.
- Always keep fan louvres clear.
- Do not place appliance in areas of direct sunlight or next to a stove, heater or similar object.
- The energy consumption depends on the installation conditions, e.g. the ambient temperature (see 1.2) .
- Keep the time the appliance is open to a minimum.
- The lower the temperature setting, the higher the power consumption.
- Store food logically. (see Appliance at a glance).
- Ensure that all food is well packed and covered for storage. This will prevent frost from forming.
- Remove food as needed in order that it does not warm too much.
- First cool warm food to room temperature before storing it .
- Defrost frozen food in the refrigerator.
- If there is a thick layer of frost in the appliance: defrost the appliance.
- Empty and switch off refrigerating unit for longer vacation periods.

2 General safety information

Danger for the user:

- This appliance is not designed for persons (including children) with physical, sensory or mental impairment or persons not having sufficient experience and knowledge, unless they are instructed in the use of the appliance and are initially supervised by a person responsible for their safety. Keep children under supervision to ensure they do not play with the appliance.
- In case of a fault, pull out the mains plug (not by pulling the connecting cable) or switch off the fuse.
- Have any repairs to or intervention in the appliance, and any change of the mains power cable, carried out by the customer service only or by other specialised personnel trained for the purpose.
- When disconnecting the appliance from the supply, always take hold of the plug. Do not pull the cable.
- Install and connect the appliance only as instructed.
- Please keep these instructions in a safe place and pass them on to any subsequent owners.

- Special-purpose lamps (incandescent lamps, LEDs, fluorescent tubes) in the appliance serve to illuminate the appliance interior and are not suited for room illumination.

Fire hazard:

- The refrigerant R 600a is environmentally friendly but flammable. Escaping refrigerant may ignite.
 - Do not damage the refrigerant circuit pipes.
 - Do not allow naked flames or ignition sources to enter the appliance.
 - Do not use any electrical appliances in the interior (e.g. steam cleaners, heaters, ice cream maker etc.).
 - If refrigerant escapes: eliminate naked flames or sources of ignition from the vicinity. Pull out the power plug. Ventilate the area well. Notify customer service.
- Do not store explosives or sprays using combustible propellants such as butane, propane, pentane, etc. in the appliance. Respective spray cans can be identified by reference to the contents printed on the can or by a flame symbol. Gases possibly escaping may ignite due to electrical components.
- Only store high-percentage alcohol in tightly sealed, upright containers. Alcohol possibly escaping may ignite due to electrical components.

Danger of tipping and falling:

- Do not misuse the plinth, drawers, doors etc. as a step or for support. This applies particularly to children.

Danger of food poisoning:

- Do not consume food which has been stored too long.

Danger of frostbite, numbness and pain:

- Avoid lasting skin contact with cold surfaces or refrigerated/frozen food or take protective steps, e.g. wear gloves. Do not consume ice cream, water ice or ice cubes immediately and do not consume them too cold.

Please observe the specific information in the other sections:

	DANGER	identifies a situation involving direct danger which, if not obviated, may result in death or severe bodily injury.
	WARNING	identifies a dangerous situation which, if not obviated, may result in death or severe bodily injury.
	CAUTION	identifies a dangerous situation which, if not obviated, may result in minor or medium bodily injury.
	NOTICE	identifies a dangerous situation which, if not obviated, may result in damage to property.

	Note	identifies useful information and tips.
--	------	---

Controls and displays

3 Controls and displays

3.1 Operating and control panel

Fig. 2

- | | |
|---|--|
| (1) Temperature controller, freezer section | (4) Temperature display, fridge section |
| (2) SuperFrost button | (5) Alarm button |
| (3) Temperature display, freezer section | (6) Temperature controller, fridge section |

3.2 Temperature display

The following are displayed in normal operation:

- the set freezing temperature
- the set cooling temperature

The freezer compartment temperature display flashes:

- the temperature setting is being changed
- after switch-on the temperature is not yet cold enough
- the temperature has risen several degrees

4 Putting into operation

4.1 Transporting the appliance

CAUTION

Risk of injury and danger of damage as a result of incorrect transport!

- ▶ Transport the appliance in a packed condition.
- ▶ Transport the appliance upright.
- ▶ Do not transport the appliance without assistance.

4.2 Installing the appliance

In the event that the appliance is damaged, contact the supplier immediately before connecting to the mains.

The floor at the site must be flat and level.

Do not install the appliance in a location where it is exposed to direct radiation of the sun, next to a cooker, heater and similar.

Do not install the appliance without assistance.

Standard EN 378 specifies that the room in which you install your appliance must have a volume of 1 m² per 8 g of R 600a refrigerant used in the appliance. If the room in which the appliance is installed is too small, a flammable gas-air mixture may form in the event of a leakage in the refrigeration circuit. The quantity of refrigerant used in your appliance is indicated on the type plate on the inside of the appliance.

Fit the appliance in stable kitchen units only.

The following ventilation gaps must be observed:

- The depth of the ventilation channel at the rear of the unit must be at least 38 mm.
- There must be a ventilation space of at least 200 cm² in the plinth and at the top of the unit.
- Basically the principle applies: the larger the ventilation space, the more energy-saving the appliance is in operation.

WARNING

Fire hazard due to dampness!

If live parts or the mains lead become damp this may cause short circuits.

- ▶ The appliance is designed for use in enclosed areas. Do not operate the appliance outdoors or in areas where it is exposed to splash water or damp conditions.

WARNING

Fire hazard due to refrigerant!

The refrigerant R 600a is environmentally friendly but flammable. Escaping refrigerant may ignite.

- ▶ Do not damage the piping of the refrigeration circuit.

WARNING

Fire hazard and danger of damage!

▶ Do not place appliances emitting heat e.g. microwaves, toasters etc. on the appliance!

- ▶ Detach the connecting cable from the rear of the appliance, removing the cable holder at the same time because otherwise there will be vibratory noise!

After installation:

- ▶ Remove the protective film from the decorative trims.
- ▶ Remove the protective film from the decorative trims and drawer fronts.
- ▶ Remove all transit supports.
- ▶ Dispose of packaging material (see 4.5).

Note

- ▶ Clean the appliance (see 6.2).

If the appliance is installed in a very damp environment, condensate may form on the outside of the appliance.

- ▶ Always see to good ventilation at the installation site.

4.3 Changing over the door hinges

Make sure that the following tools are placed ready:

- scissors
- cordless screwdriver
- screwdriver Torx@15, 20, 25, 30

Slide the appliance 2/3 of the way into the recess.

Pull out the mains plug.

Open the doors.

Fig. 3

► Lift off the covers Fig. 3 (1,2,3,4,5).

CAUTION

Risk of injury if the door tips!
 ► Take good hold of the door.
 ► Set down the door carefully.

- Unscrew top bearing bolt Fig. 3 (6) from the refrigerator compartment door Fig. 3 (7).
- Tilt the refrigerator compartment door Fig. 3 (7) forwards a little and lift it off.

CAUTION

Risk of injury if the door tips!
 ► Take good hold of the door.
 ► Set down the door carefully.

- Remove the middle bearing pin Fig. 3 (8).
- Lift off freezer compartment door Fig. 3 (9).
- Unscrew the top turn hinge Fig. 3 (10) and middle turn hinge Fig. 3 (11) and screw them firmly into place again on the opposite side with the same screws (with 4 Nm).
- Transfer bottom bearing bolt Fig. 3 (12) with washer Fig. 3 (13).
- Place the freezer compartment door at the bottom on the bearing bolt Fig. 3 (12) and washer Fig. 3 (13). **Detail Z**
- Insert the middle bearing pin Fig. 3 (8) through the middle turn hinge Fig. 3 (11) into the door bearing. **Detail Y**
- Place refrigerator compartment door on the middle bearing bolt Fig. 3 (8). **Detail Y**
- Pass the top bearing pin Fig. 3 (6) through the **outer** hole in the turn hinge Fig. 3 (10) and insert it into the door bearing of the refrigerator compartment door Fig. 3 (7). Screw it in **firmly (with 4 Nm)**. **Detail X**
- Turn covers Fig. 3 (1,2,3,4,5) through 180° and fit them on the opposite side.

WARNING

Risk of injury due to the door dropping out!
 If the bearing parts are not screwed into place firmly enough, the door may drop out. This may lead to severe injuries. What is more, the door may not close and therefore the appliance may fail to cool properly.

- Screw on the bearing brackets/bearing pins tightly (4 Nm).
- Check all of the screws and retighten if necessary.

4.4 Installation

All installation components are supplied.

20		22	
1x		1x	
21		23	Torx® 25
1x		2x	∅ 4,8 x 16
		28	Torx® 15
		1x	∅ 4 x 19
		31	
		4x	
		32	Torx® 15
		4x	∅ 3,9 x 9,5
		33

		34	Torx® 15
		12x	∅ 4 x 14
29	Torx® 15	30	
3x	∅ 4 x 36	2x	
		5	
		1x	

Fig. 4

Make sure that the following tools are placed ready:

- screwdriver Torx®15, 20, 25, 30
- scissors
- cordless screwdriver

The shelf and side walls of the unit must be at right-angles to one another. Align the unit with a spirit level and an angle. If necessary, level out by building up from underneath.

Check installation dimensions:

Fig. 5

Putting into operation

	A	C	D
ICS 30	1769.5 mm	669 mm	1772 mm - 1788 mm
ICS 31	1769.5 mm	523 mm	1772 mm - 1788 mm

4.4.1 Installing the appliance

Fig. 6

- ▶ Detach the connecting cable from the rear of the appliance, removing the cable holder because otherwise there will be vibratory noise!
- ▶ Lay the connecting cable with the help of a string so that the appliance can be easily connected after installation.
- ▶ Slide the appliance 2/3 of the way into the recess.

Fig. 7

- ▶ Fit equaliser trim Fig. 8 (20) so as to be flush with the side wall of the appliance on the handle side: slide into the channel and engage in the key holes.
- ▶ Stick trim Fig. 9 (21) onto the side of the appliance on the handle side flush with the front: remove protective film and affix trim.
- ▶ Shorten trim Fig. 9 (21) to the height of the recess, if necessary.
- ▶ Apply trim Fig. 9 (21) exactly underneath the mounting bracket Fig. 6 (22).

Fig. 8

Fig. 9

- ▶ Remove Fig. 10 (2) cover. For initial installation:
- ▶ Remove cover Fig. 6 (3) from the middle bearing support Fig. 10 (11).

Fig. 10

- ▶ Screw on mounting bracket Fig. 11 (22) with screws Fig. 11 (23).

Fig. 11

- ▶ Slide the appliance into the recess, paying attention to the power cable!
- ▶ Adjust the appliance in depth: align front edge of bearing support Fig. 12 (24), bearing support Fig. 12 (25) and mounting bracket Fig. 12 (22) flush with the front edge of the unit base and side wall.

Fig. 12

- ▶ Adjust the appliance in height: by way of the adjusting screws Fig. 13 (26) in the bearing supports Fig. 13 (24,25).

Fig. 13

NOTICE

Risk of damage to the wall of the kitchen unit!

- ▶ Carefully turn the adjusting screw to the position wanted.

- ▶ Bring adjusting screw Fig. 14 (27) in middle bearing support Fig. 14 (11) into abutment with the side wall of the unit.

Fig. 14

- ▶ Fix the appliance at the top: press the appliance against the wall of the unit and fix with particle board screw Fig. 15 (28) through fastening bracket Fig. 15 (22).
- ▶ Fix appliance in the middle: through fastening screw Fig. 15 (27) with particle board screw Fig. 15 (29).
- ▶ Fix appliance at the bottom: with particle board screws Fig. 15 (29) through adjusting screws Fig. 15 (26) in the bearing support Fig. 15 (24) and bearing support Fig. 15 (25).
- ▶ Check that all the screw fittings are tight.

Fig. 15

- ▶ If necessary, align the equaliser trim *Fig. 16 (20)* by moving it parallel to the ceiling of the unit. It must not project.

Fig. 16

- ▶ Fold in side part of the mounting bracket *Fig. 17 (22)*.
- ▶ Re-engage *Fig. 17 (2)* cover.
- ▶ Close all holes with stoppers *Fig. 17 (30,5)*.

Fig. 17

- ▶ Clip onto the middle bearing support *Fig. 18 (11)* the cover *Fig. 18 (3)*.

Fig. 18

- ▶ Fit door connecting element *Fig. 19 (31)* with screw *Fig. 19 (32)*, paying attention to the position of the handle.

With the door fully open:

- ▶ Slide in door connecting rail *Fig. 19 (33)* and fasten to the unit door with screws *Fig. 19 (34)*, maintaining clearance *d* (wall thickness of kitchen cabinet).
- ▶ Adjust the door connecting element so that the unit door does not make contact with the unit wall on the handle side (gap of approx. 1 mm).
- ▶ If the unit door is large or sectioned, fit another door connector if necessary.

Fig. 19

Fig. 20

4.5 Disposing of packaging

WARNING

- ▶ Danger of suffocation due to packing material and plastic film!
- ▶ Do not allow children to play with packing material.

The packaging is made of recyclable materials:

- corrugated board/cardboard
- expanded polystyrene parts
- polythene bags and sheets
- polypropylene straps
- nailed wooden frame with polyethylene panel*

- ▶ Take the packaging material to an official collecting point.

4.6 Connecting the appliance

NOTICE

Risk of damage to the electronic control system!

- ▶ Do not use stand-alone inverters (conversion of d.c. to a.c./three-phase) or energy saving plugs.

WARNING

Fire and overheating hazard!

- ▶ Do not use extension cables or multiple socket outlets.

The type of current (alternating current) and voltage at the installation site have to conform with the data on the type plate (see Appliance at a glance).

Connect the appliance only with a properly installed socket outlet with earthing contact. The socket outlet must be fused with 10 A or higher.

- ▶ Check the electrical connection.
- ▶ Plug in the power plug.

4.7 Switching on the appliance

Note

- ▶ To switch on the entire appliance it is necessary only to switch on the freezer compartment. In so doing, the refrigerator compartment is automatically switched on as well.

Put the appliance into operation about 4 hours before first loading food to be frozen.

Do not load food to be frozen before the alarm button goes out.

- ▶ Turn the temperature control of the freezer compartment *Fig. 2 (1)* to the right with a coin.
 - ▶ Turn the temperature control of the refrigerator compartment *Fig. 2 (6)* to the right with a coin.
 - ▷ The temperature displays light up.
 - ▷ The interior light goes on.
 - ▷ The alarm button *Fig. 2 (5)* lights up.
- When the alarm button *Fig. 2 (5)* is no longer lit:
- ▶ begin freezing .

5 Control

5.1 Temperature alarm

The audible alarm sounds if the freezer temperature is not cold enough.

The temperature display and the alarm button flash at the same time.

The cause of the temperature being too high may be:

- warm fresh food was placed inside
- too much warm ambient air flowed in when rearranging and removing food
- power failure for some time
- the appliance is faulty

The audible alarm is automatically silenced, the alarm button *Fig. 2 (5)* goes out and the temperature display stops flashing when the temperature is sufficiently cold again.

If the alarm status persists: (see Malfunction).

Note

Food may be spoilt if the temperature is not cold enough.

- ▶ Check the quality of the food. Do not consume spoiled food.

Control

5.1.1 Muting the temperature alarm

The audible alarm can be muted. When the temperature is sufficiently cold again, the alarm function is active again.

- ▶ Press alarm button *Fig. 2 (5)*.
- ▷ The audible alarm is silenced.

5.2 Refrigerator compartment

The natural circulation of air in the refrigerator compartment results in zones differing in temperature. It is coldest directly above the vegetable drawers and at the rear wall. It is warmest at the top front of the compartment and in the door.

5.2.1 Food refrigeration

Note

The energy consumption increases and the cooling performance decreases if the ventilation is inadequate.

- ▶ Always keep the air slits of the fan free.
- ▶ Store perishable food such as ready-to-serve dishes, meat products and sausages in the coldest zone. Place butter and preserves in the upper area and in the door (see Appliance at a glance).
- ▶ Use recyclable plastic, metal, aluminium and glass containers and cling film for wrapping.
- ▶ Use the front area of the refrigerator compartment floor only for briefly putting down cooled products, e.g. when rearranging and sorting. However do not leave cooled products there otherwise they may be pushed back or tipped over when the door is closed.
- ▶ Do not store food too close together to enable good air circulation.
- ▶ To safeguard bottles from tipping over: move the bottle holder.

5.2.2 Setting the temperature

The temperature can be set between the first point (warmest temperature, lowest refrigerating capacity) and max. (coldest temperature, highest refrigerating capacity).

The recommended temperature is 5 °C i.e. a medium control setting.

- ▶ Turn the temperature control of the refrigerator compartment *Fig. 2 (6)* with a coin until the temperature wanted flashes in the temperature display.

The temperature can be set slightly colder within a temperature range, e.g. 5 °C to 7 °C, or between two points of the control.

- ▶ If required, slowly turn the temperature control further.
- ▷ The lit bar of the temperature range e.g. 5 °C to 7 °C flashes briefly. The temperature within the temperature range was set colder.

The temperature is dependent on the following factors:

- the frequency of door opening
- the room temperature of the installation site
- the type, temperature and quantity of frozen food
- ▶ In case of need, adjust the temperature with the control.

5.2.3 Fan

With the fan you can rapidly cool large quantities of fresh food or achieve a relatively even distribution of temperature across all the storage levels.

The forced-air cooling is to be recommended:

- at high room temperature (from approx. 30 °C)
- at high humidity

The forced-air cooling uses slightly more energy. To save energy, the fan switches off automatically when the door is open.

Using the fan

- ▶ To switch on: set the fan switch to I.
- ▷ The fan is switched on.
- ▶ To switch off: set the fan switch to 0.
- ▷ The fan is switched off.

5.2.4 Relocating the shelves

The shelves have stops preventing them from being unintentionally pulled out.

- ▶ Lift the shelf and draw it out forwards.

- ▶ Insert shelf with the raised edge pointing upwards at the back.
- ▷ The food does not freeze onto the rear wall.

5.2.5 Using the sectioned shelf*

Fig. 21

- ▶ The glass shelf with stop face (2) has to be at the back.

5.2.6 Moving the storage rack

- ▶ Remove storage rack according to illustration.

Always remove the butter and cheese compartment together with the lid.*

- ▶ To remove lid: Press one side part of the butter and cheese compartment outwards until the lid pin is clear and then remove the lid sideways.*

5.2.7 Removing the bottle holder

- ▶ Remove the bottle holder according to the illustration.

5.3 Freezer compartment

You can store frozen food, make ice cubes and freeze fresh food in the freezer compartment.

5.3.1 Freezing food

The rating plate indicates the maximum quantity of fresh food you can freeze within 24 hours (see Appliance at a glance) under "Freezing capacity ... kg/24h".

The maximum load of frozen food for the drawers is 25 kg each and for the shelves 35 kg each.

A vacuum is generated after the door is closed. After closing the door, wait for about 1 minute and then it opens more easily.

CAUTION

Risk of injury due to broken glass!

Bottles and cans containing drinks may burst when being frozen. This applies particularly to sparkling drinks.

- ▶ Do not freeze bottles and cans containing drinks!

In order that the food is rapidly frozen through to the core, do not exceed the following quantities per pack:

- Fruit, vegetables up to 1 kg
- Meat up to 2.5 kg
- ▶ Pack the food in portions in freezer bags, reusable plastic, metal or aluminium containers.

5.3.2 Thawing food

- in the refrigerator compartment
- at room temperature
- in a microwave oven
- in a conventional or fan oven
- ▶ Food once thawed should be re-frozen only in exceptional cases.

5.3.3 Setting the temperature

The temperature can be set between the first point (warmest temperature, lowest refrigerating capacity) and max. (coldest temperature, highest refrigerating capacity), the recommended temperature is -18 °C i.e. the 3rd point.

- ▶ Turn the temperature control of the freezer compartment *Fig. 2 (1)* with a coin until the temperature wanted lights up in the temperature display.

The temperature is dependent on the following factors:

- the frequency of door opening
- the room temperature of the installation site
- the type, temperature and quantity of frozen food

The temperature can be set slightly colder within a temperature range, e. g. -15 °C to -18 °C or between two control settings.

- ▶ If required, slowly turn the temperature control further.
- ▷ The lit bar of the temperature range, e. g. -18 °C flashes briefly. The temperature within the temperature range was set colder.

5.3.4 SuperFrost

With this function you can freeze fresh food quickly through to the core. The appliance operates with maximum refrigeration. The noise of the refrigeration unit may be temporarily louder as a result.

In addition, frozen food already in storage is given a "cold reserve". The food stays frozen longer as a result when you defrost the appliance.

The maximum amount of fresh food which can be frozen in 24 h is indicated on the type plate under "freezing capacity ... kg/24h". This amount varies according to the model and climate rating.

You do not have to activate SuperFrost in the following cases:

- when placing frozen food in the freezer
- when freezing up to about 2 kg fresh food daily

- ▶ Briefly press the SuperFrost button *Fig. 2 (2)*.
- ▷ The SuperFrost button shines.
- ▷ The freezer temperature drops, the appliance operates with the maximum refrigerating capacity.
 - In case of a small amount of food to be frozen:
 - ▶ wait about 6 h.
 - ▶ Place the fresh food in the bottom drawers.
 - In case of the maximum amount of food to be frozen (see type plate):
 - ▶ wait about 24 h.
 - ▶ Place wrapped food straight onto the shelves and put it into the drawers once it has frozen.
- ▷ SuperFrost is automatically deactivated after about 65 h.
- ▷ The SuperFrost button is dark.
- ▷ The appliance continues to operate in the energy-saving, normal mode.

5.3.5 Drawers

- ▶ To store frozen food directly on the shelves: pull the drawer forwards and lift it out.

5.3.6 Shelves

- ▶ To remove the shelf: lift up at the front and pull out.
- ▶ To put the shelf back: simply push in as far as it will go.

Maintenance

5.3.7 VarioSpace

Apart from being able to remove the drawers, you can also remove the shelves, creating space for large items of frozen food. Poultry, meat, large pieces of game and high bakery products can be frozen in one piece and prepared.

- ▶ The maximum load of frozen food for the drawers is 25 kg each and for the shelves 35 kg each.

5.3.8 Information system

①		2-6		④
②		4-8		⑤
③		6-12		⑥

Fig. 22

- (1) Ready-made meals, ice
- (2) Pork, fish
- (3) Fruit, vegetables
- (4) Sausages, bread cream
- (5) Game, mushrooms
- (6) Poultry, beef/veal

The figures indicate the storage time in months for several types of frozen food in each case. Storage times given are guide times.

5.3.9 Cold storage accumulators*

The cold storage accumulators prevent the temperature from rising too fast in the event of power failure.

Using cold storage accumulators*

- ▶ Freeze and store the cold storage accumulators in the ceiling of the freezer compartment (appliances without No-Frost module).

With the top drawer removed:

- ▶ to insert cold storage accumulators: slide cold storage accumulator into the top back of the freezer compartment ceiling and snap into place at the front.

With the top drawer removed:

- ▶ to remove cold storage accumulators: take hold of the cold storage accumulator at the side and press it down for removal.

6 Maintenance

6.1 Manual defrosting

The **refrigerator compartment** is defrosted automatically. The defrost water evaporates as a result of the heat of the compressor. Drops of water on the rear wall are perfectly normal.

- ▶ Regularly clean the drain opening to allow the water to flow away (see 6.2).

A layer of frost or ice can build up in the **freezer compartment** after a long period of operation.

The layer of frost or ice builds up faster if the appliance is opened often or if the food is warm when placed inside. However, a thick layer of ice will increase the appliance's energy consumption. You should therefore defrost the appliance regularly.

CAUTION

Risk of injury and damage as a result of hot steam!

- ▶ Do not use electric heaters or steam cleaners, naked flames or defrosting sprays for defrosting.
- ▶ Do not remove ice using sharp instruments.

- ▶ Switch on SuperFrost one day before defrosting.
- ▶ The frozen goods are provided with a "cold reserve".
- ▶ Switch off the appliance.
- ▶ The temperature display goes out.
- ▶ Pull out the power plug or switch off the fuse.
- ▶ Place cold storage accumulators on top of the frozen food.*
- ▶ If possible, put the frozen goods in the freezer drawer, wrapped in newspaper or a blanket, and store in a cool place.
- ▶ Place a pan with hot, not boiling water on a middle shelf.

-or-

- ▶ Half-fill the two lower drawers with lukewarm water and put them in the appliance.

- ▶ Defrosting is speeded up.
- ▶ Defrost water is collected in the drawers.
- ▶ Leave the door of the appliance open while defrosting.
- ▶ Remove detached pieces of ice.
- ▶ Pay attention that the defrost water does not run into the kitchen unit.
- ▶ If necessary, pick up defrost water several times, using a sponge or cloth.
- ▶ Clean the appliance (see 6.2) and rub dry.

6.2 Cleaning the appliance

Before cleaning:

CAUTION

Risk of injury and damage as a result of hot steam!

- ▶ Hot steam may damage the surfaces and cause burns.
- ▶ Do not use any steam cleaners!

NOTICE

Incorrect cleaning damages the appliance!

- ▶ Do not use cleaning agents in concentrated form.
- ▶ Do not use any scouring or abrasive sponges or steel wool.
- ▶ Do not use any cleaning agents containing sand, chloride, chemicals or acid.
- ▶ Do not use chemical solvents.
- ▶ Do not damage or remove the type plate on the inside of the appliance. It is important for the customer service.
- ▶ Do not pull off, bend or damage cables or other components.
- ▶ Do not allow any cleaning water to enter the drain channel, ventilation grille or electrical parts.

- ▶ Empty the appliance.
- ▶ Pull out the plug.

- Use soft cleaning cloths and a multi-purpose cleaning agent with neutral pH value.
- Only use food compatible cleaning and care agents on the inside of the appliance.
- ▶ Regularly clean ventilation grilles.
- ▷ Dust deposits increase energy consumption.

Interior:

- ▶ Clean the plastic surfaces, outside and inside, by hand using lukewarm water and a little washing-up liquid.
- ▶ To clean the drain opening: remove any deposits with a fine instrument, e.g. a cotton bud.

Items of equipment:

- ▶ Clean items of equipment by hand with lukewarm water and a little washing-up liquid.
- ▶ For cleaning, remove the support rails for the half-sized glass shelves.
- ▶ To dismantle the shelves: remove the trims and side parts.
- ▶ Take apart the door rack as illustrated.*

After cleaning:

- ▶ Wipe dry the appliance and items of equipment.
- ▶ Connect the appliance and switch it on again.
- ▶ Switch on SuperFrost (see 5.3.4).
- When the temperature is sufficiently cold:
- ▶ Put the food back inside.

6.3 Replacing the interior light

Bulb data

- max. 25 W
- Bulb fitting: E14
- Current type and voltage must conform with the data on the type plate
- ▶ Switch off the appliance.
- ▶ Pull out the mains plug or switch off/unscrew the fuse.

- ▶ Take hold of the lamp cover at the top and bottom *Fig. 23 (1)*.
- ▶ Disengage the lamp cover at the back and detach it *Fig. 23 (2)*.
- ▶ Replace the bulb *Fig. 23 (3)*.

Apply slight pressure when turning the bulb to overcome the friction of the seal. Pay attention that the seal is seated properly in the lamp socket.

- ▶ Clip the back end of the cover in and clip the sides into place.

Fig. 23

6.4 Customer service

First check whether you can correct the fault yourself by reference to the list (see Malfunzion). If this is not the case, please contact the customer service whose address is given in the enclosed customer service list.

WARNING

Risk of injury if repair work is not carried out professionally!

- ▶ Have any repairs and action - not expressly specified - on the appliance and mains cable carried out by service personnel only. (see Maintenance)

- ▶ Read the appliance designation *Fig. 24 (1)*, service No. *Fig. 24 (2)* and serial No. *Fig. 24 (3)* off the type plate located inside the appliance on the left-hand side.

Fig. 24

- ▶ Notify the customer service, specifying the fault, appliance designation *Fig. 24 (1)*, service No. *Fig. 24 (2)* and serial No. *Fig. 24 (3)*.
- ▷ This will help us to provide you with a faster and more accurate service.
- ▶ Keep the appliance closed until the customer service arrives.
- ▷ The food will stay cool longer.
- ▶ Pull out the mains plug (not by pulling the connecting cable) or switch off the fuse.

7 Malfunzion

Your appliance is designed and manufactured for a long life span and reliable operation. If a malfunction nonetheless occurs during operation, check whether it is due to a handling error. In this case you will have to be charged for the costs incurred, even during the warranty period. You may be able to rectify the following faults yourself:

Appliance does not work.

- The appliance is not switched on.
- ▶ Switch on the appliance.
- The power plug is not properly inserted in the wall socket.
- ▶ Check power plug.
- The fuse of the wall socket is not in order.
- ▶ Check fuse.

The compressor runs for a long time.

- The compressor switches to a low speed when little cold is needed. Although the running time is increased as a result, energy is saved.
- ▶ This is normal in energy-saving models.

Decommissioning

→ SuperFrost is activated.

- ▶ The compressor runs for longer in order to rapidly cool the food. This is normal.

Excessive noise.

→ Speed-controlled* compressors may produce varying running noise due to different speed steps.

- ▶ The sound is normal.

A bubbling and gurgling noise.

→ This noise comes from the refrigerant flowing in the refrigeration circuit.

- ▶ The sound is normal.

A quiet clicking noise.

→ The noise is produced whenever the refrigeration unit (motor) automatically switches on or off.

- ▶ The sound is normal.

A hum. It is briefly a little louder when the refrigeration unit (the motor) switches on.

→ The refrigeration increases automatically when the SuperFrost function is activated, fresh food has just been placed in the appliance or the door has been left open for a while.

- ▶ The sound is normal.

→ The ambient temperature is too high.

- ▶ Solution: (see 1.2)

A low hum.

→ The sound is produced by air flow noise of the fan.

- ▶ The sound is normal.

Vibratory noise.

→ The appliance is not standing firmly on the floor. As a result, adjoining units or objects are set into vibration by the running refrigeration unit.

- ▶ Move bottles and containers apart.

The SuperFrost button flashes together with the temperature display.

→ There is a fault.

- ▶ Contact the customer service. (see Maintenance).

The temperature is not cold enough.

→ The door of the appliance is not properly closed.

- ▶ Close the door of the appliance.

→ Insufficient ventilation.

- ▶ Clear ventilation grilles.

→ The ambient temperature is too high.

- ▶ Solution: (see 1.2) .

→ The appliance was opened too frequently or for too long.

- ▶ Wait until the appliance reaches the required temperature itself. If not, contact the customer service. (see Maintenance).

→ Too much fresh food was placed inside without SuperFrost.

- ▶ Solution: (see 5.3.4)

→ The appliance is too close to a heat source.

- ▶ Solution: (see Putting into operation).

→ The appliance was not inserted properly into the recess.

- ▶ Check whether the appliance was inserted correctly and the door closes properly.

The interior light is not on.

→ The appliance is not switched on.

- ▶ Switch on the appliance.

→ The door was open longer than 15 min.

- ▶ The interior light automatically switches off if the door has been open for about 15 min.

→ If the interior light is not on but the temperature display is lit, the bulb is faulty.

- ▶ Change the bulb. (see Maintenance).

8 Decommissioning

8.1 Switching off the appliance.

Note

- ▶ To switch off the entire appliance it is necessary only to switch off the freezer compartment. In so doing, the refrigerator compartment is automatically switched off as well.

8.1.1 Switching off the freezer compartment

- ▶ Using a coin, turn the temperature control of the freezer compartment *Fig. 2 (1)* to 0.
- ▷ The temperature displays are dark.

8.1.2 Switching off the refrigerator compartment

- ▶ Using a coin, turn the temperature control of the refrigerator compartment *Fig. 2 (6)* to 0.
- ▷ The temperature display is dark.

8.2 Taking the appliance out of service

- ▶ Empty the appliance.
- ▶ Pull out the power plug.
- ▶ Clean the appliance (see 6.2) .

- ▶ Leave the door open to prevent odour.

9 Disposing of the appliance

The appliance contains some reusable materials and should be disposed of properly - not simply with unsorted household refuse. Appliances which are no longer needed must be disposed of in a professional and appropriate way, in accordance with the current local regulations and laws.

When disposing of the appliance, ensure that the refrigeration circuit is not damaged to prevent uncontrolled escape of the refrigerant it contains (data on type plate) and oil.

- ▶ Disable the appliance.
- ▶ Pull out the plug.
- ▶ Cut through the connecting cable.
